Security Audit Report FOR

BTCBG

OVERVIEW

The Expelee team has performed a line-by-line manual analysis and automated review of the smart contract. The smart contract was analysed mainly for common smart contract vulnerabilities, exploits, and manipulation hacks.

According to the smart contract audit:

 Audit Result	Passed
 KYC Verification	Not Done

PROJECT DESCRIPTION

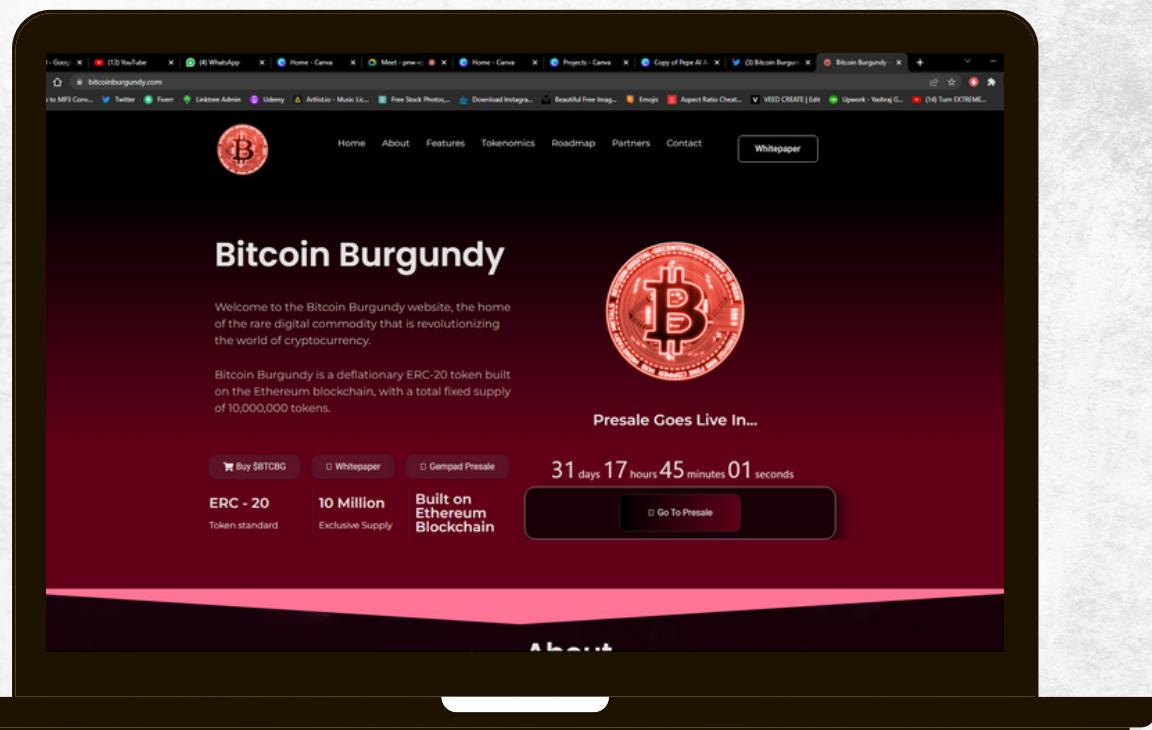

BTCBG

Bitcoin Burgundy is a deflationary ERC-20 token built on the Ethereum blockchain, with a total fixed supply of 10,000,000 tokens. The goal of the organization is to establish a long-term store of value for its users, incorporating a distinctive tokenomics structure that ensures a fair and equitable distribution of tokens, while also providing incentives for ongoing development and marketing initiatives.

AUDIT METHODOLOGY

Audit Details

Our comprehensive audit report provides a full overview of the audited system's architecture, smart contract codebase, and details on any vulnerabilities found within the system.

Audit Goals

The audit goal is to ensure that the project is built to protect investors and users, preventing potentially catastrophic vulnerabilities after launch, that lead to scams and rugpulls.

Our analysis includes both automatic tests and manual code analysis for the following aspects:

- Exploits
- Back-doors
- Vulnerability
- Accuracy
- Readability

Tools

- DE
- Open Zeppelin

RISK CLASSIFICATION

When performing smart contract audits, our specialists look for known vulnerabilities as well as logical and access control issues within the code. The exploitation of these issues by malicious actors may cause serious financial damage to projects that failed to get an audit in time. We categorize these vulnerabilities by the following levels:

High Risk

Issues on this level are critical to the smart contract's performance/functionality and should be fixed before moving to a live environment.

Medium Risk

Issues on this level are critical to the smart contract's performance/functionality and should be fixed before moving to a live environment.

Low Risk

Issues on this level are minor details and warning that can remain unfixed.

Informational

Information level is to offer suggestions for improvement of efficacy or security for features with a risk free factor.

AUDIT SUMMARY

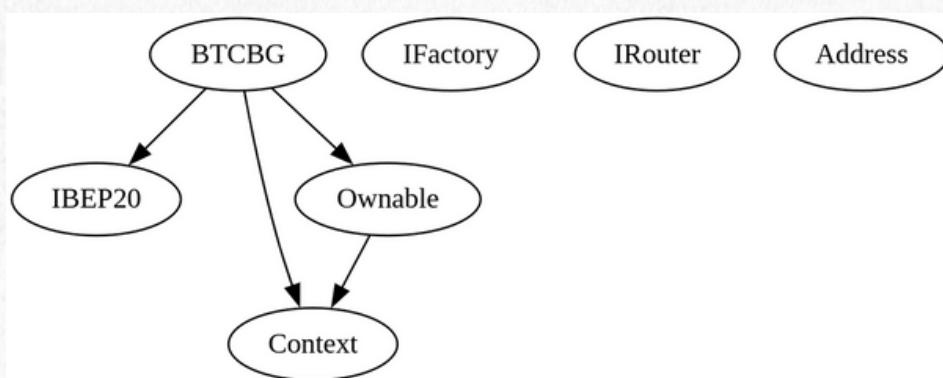

Used Tools:

The following tools were utilized to ensure the reliability and functionality of the code:

- 1. Manual Review:** The code underwent a thorough review process by the Expelee team, which involved analyzing the code line by line. This review helped to identify any potential issues or bugs that could impact the performance of the code.
- 2. BSC Test Network:** The code was tested extensively on the BSC Test network to ensure that it functions as intended. All tests were conducted using the BSC Test network, and each test has a corresponding transaction attached to it. These tests can be accessed in the "Functional Tests" section of the report.

Overall, these tools were instrumental in identifying any potential issues and ensuring that the code functions as expected.

Inheritance Trees:

Summary:

-0.00025% of each buy/sell/transfer is burned until supply reach 5 mil tokens.

- Owner is not able to set buy/sell/transfer taxes higher than 12.5%
- Owner must enable trading for investors to be able to trade**
- Owner is not able to set max buy/sell/transfer/hold amount
- Owner is not able to blacklist an arbitrary wallet
- Owner is not able to disable trades
- Owner is not able to mint new tokens
